

About the center

The recycling center will both accept materials and redistribute materials into the local economy.

The prices shown opposite are the costs for both types of materials.

It is our intention to expand our capability and products offered at our facility. If you do not see something that you feel could benefit our community please let us know so that we can investigate what may be required to make that material or service available to State College. Our overall objective is to prevent as many materials as possible from going to land fills and return them to our local economy in a useful and cost effective manner.

We are available to survey the site of a demolition project to assist with determining what materials can be recycled and what sorting may be necessary to provide you with the most economical disposal solution.
